

John R Guilliams

720.300.6580

John began his career as a draftsman for a small Architectural firm in South Florida. He moved to Colorado in 1990 and began specializing in the production housing industry. His early involvement with companies like Ryland, US Home and Capital Pacific Homes set the groundwork for his understanding of the housing market, knowledge of construction, and strong customer relations.

In 2000 John began working on Land Planning projects. This skill allowed him to work on several "Boutique Projects" from conception to completion as the Project Designer/Manager.

Recently John has been promoting sustainability to his peers and clients. He has spoken at several HBA Green Build Conferences and is now teaching two construction sustainability classes at Red Rocks Community College.

John's passion for design and sustainability is an asset to any team, and his years of experience in guiding housing industry projects will result in a successful venture.
